CRUSHED STONE AND SAND AND GRAVEL IN THE FOURTH QUARTER 2004

An estimated 413 million metric tons of *crushed stone* were produced and shipped for consumption in the United States in the fourth quarter of 2004, an increase of 4.2% compared with the same period of 2003. The estimated annual production of *crushed stone* shipped for consumption in 2004 was 1.65 billion metric tons, an increase of 7.8% compared with 2003. The estimated 2004 total annual production of *crushed stone* was the highest production ever recorded in the United States.

The estimated output of *construction sand and gravel* produced for consumption in the fourth quarter of 2004 was 297 million metric tons, a slight increase compared with the same period of 2003. The estimated annual production of *construction sand and gravel* shipped for consumption in 2004 was 1.21 billion metric tons, a 4.3% increase compared with 2003. The estimated 2004 total annual production of *construction sand and gravel* was also the highest production ever recorded in the United States.

An estimated 715 million metric tons of total *aggregates - crushed stone and construction sand and gravel* - were produced and shipped for consumption in the United States in the fourth quarter of 2004, an increase of 3.5% compared with the same period of 2003. The estimated 2004 total annual production of *aggregates* produced for consumption was 2.86 billion metric tons, a 6.7% increase compared with 2004. The estimated 2004 total annual production of *aggregates* was the highest production ever recorded in the United States.

The above estimates are based on information reported to the U.S. Geological Survey quarterly sample survey by *crushed stone* and *construction sand and gravel* producers.

The significant increases in the production of *crushed stone* and *construction sand and gravel* during this quarter were due to an increase in construction activity especially in the eastern and southern part of the United States, compensating in part for the unfavorable weather conditions that occurred in the first part of the year.

In the fourth quarter of 2004, there was also a slight increase in portland cement consumption compared with the same period of 2003, and a 6.5% increase for 2004 compared with 2003, another indication of increased construction activity at the national level.

The USGS quarterly survey on domestic production of *crushed stone, construction sand and gravel, and aggregates* has become a significant indicator of construction activity at the national as well as State level. This survey is a sample survey that generates production for consumption estimates by quarters for each State, except Alaska and Hawaii, and each geographic division, based on information reported voluntarily by a limited number of producing companies. Occasionally, the number of companies reporting in an area varies from quarter to quarter, or previously reported data by some companies are revised. If such changes in the size or the composition of the statistical sample occur, the estimated quantities for prior quarters are recalculated. The latest release of the quarterly Mineral Industry Surveys contains the most recent estimated totals and percentage changes and supersedes previously published information.

The production-for-consumption estimates for *crushed stone, construction sand and gravel, and aggregates*, are generated independently for each State and each geographic division, which are treated as separate statistical sample areas. Therefore, some differences may exist between the total for a division and the sum of State totals that are part of the same geographic division.

The leading geographic divisions in the production of *crushed stone* sold or used in the fourth quarter of 2004 were the South Atlantic with 104 million metric tons, or 25.2% of the U.S. total, followed by the East North Central with 79.4 million metric tons, or 19.8%, and the Middle Atlantic with 49.5 million metric tons, or 12.0%.

The estimated *crushed stone* sold or used in the fourth quarter of 2004 increased in seven of the nine geographic divisions

compared with the same period of 2003. The largest increases in percentage were recorded in the West North Central (10.5%), the South Atlantic (9%), and the Pacific (3.4%). Decreases in the production of *crushed stone* were recorded in the Middle Atlantic (-3.3%), and the West North Central (-1%) divisions.

The leading geographic divisions for the total amount of *construction sand and gravel* sold or used in the fourth quarter of 2004 were the Mountain with 60.7 million metric tons, or 20.4% of the U.S. total, the East North Central with 54.5 million metric tons, or 18.4%, and the Pacific with 52.1 million metric tons, or 17.5%.

The estimated *construction sand and gravel* sold or used in the fourth quarter of 2004 increased only in three of the nine geographic divisions compared with the same period of the previous year. The increases in percentages were recorded in the West North Central (20%), the Mountain (19.3%), and the South Atlantic (0.9%) divisions. The largest decreases were recorded in the East South Central (-11.9%), the West South Central (-5%) and the Middle Atlantic (-4.9%) divisions.

The leading geographic divisions for the total amount of *aggregates* sold or used in the fourth quarter of 2004 were the East North Central with 139 million metric tons, or 19.4% of the U.S. total, followed by the South Atlantic with 127 million metric tons, or 17.8%, and the West South Central with 76.8 million metric tons, or 10.7%.

The estimated U.S. output of total *aggregates* sold or used in the fourth quarter of 2004 increased in percentages compared with the prior year in six of the nine geographic divisions. The largest increases were recorded in the Mountain (15.7%), the West North Central (13.7%), and the South Atlantic (8%) divisions. The estimated totals by quarters for the geographic divisions do not include Alaska and Hawaii.

Production for consumption of *crushed stone* increased in the fourth quarter of 2004 in 28 of the 40 estimated States, compared with the same quarter of 2003. Significant increases in production occurred in Florida (32%), Wisconsin (26.9%), Maine (22.7%), South Carolina (21.4%), and Colorado (21.3%). Significant decreases in production of *crushed stone* in the fourth quarter of 2004 occurred in New Mexico (-31.9%), New York (-20.7%), and West Virginia (-11.3%).

The five leading States in the production for consumption of *crushed stone* in the fourth quarter of 2004 were Pennsylvania, Texas, Florida, Illinois, and Ohio. Their combined total production for consumption represented 32.8% of the U.S. total.

Production for consumption of *construction sand and gravel* increased in the fourth quarter of 2004 in 17 of the 42 estimated States, with significant increases in percentages recorded in Colorado (39.8%), New Mexico (39.5%), Missouri (38.6%), South Dakota (36%), and Oregon (26.1%). Significant decreases in production of *construction sand and gravel*

occurred in West Virginia (-30.2%), Alabama (-23.7%), and Vermont (-19.9%).

The five leading States in the production for consumption of *construction sand and gravel* in the fourth quarter of 2004 were California, Texas, Arizona, Michigan, and Minnesota. Their combined total production for consumption represented 35.9% of the U.S. total.

The estimated total *aggregates* sold or used in the fourth quarter of 2004 increased in 32 of the 45 estimated States, compared with the same quarter of 2003. Significant increases in production occurred in Colorado (32.6%), Florida (24.1%), Idaho (20.8%), New Mexico (20.7%), and Minnesota (19.7%). Significant decreases in production of *aggregates* in the fourth quarter of 2004 occurred in Louisiana (-30.1%), New York (-17.8%), and West Virginia (-12.8%).

The five leading States in the estimated production-for-consumption of total *aggregates* in the fourth quarter of 2004 were Texas, California, Pennsylvania, Florida, and Ohio. Their combined production was 29.2% of the U.S. total.

The fourth quarter survey also provides revised annual preliminary estimates by State for 2004. The 10 leading States in the production of *crushed stone* for 2004 were Texas, Pennsylvania, Florida, Ohio, Missouri, Georgia, Illinois, Virginia, North Carolina, and Tennessee. Their combined total production for consumption represented 53.4% of the U.S. total.

The 10 leading States in the production of *construction sand and gravel* for 2004 were California, Texas, Arizona, Michigan, Minnesota, Ohio, Colorado, Washington, Wisconsin, and Nevada. Their combined production for consumption represented 54.3% of the U.S. total.

The 10 leading States in the estimated production of *total aggregates* for 2004 were California, Texas, Pennsylvania, Florida, Ohio, Illinois, Michigan, Arizona, Indiana, and Missouri. Their combined production for consumption represented 46.6% of the U.S. total.

A total of 290 companies representing *crushed stone* and *construction sand and gravel* producers reported production for consumption information to the fourth quarter sample survey. The large participation of the producing companies in this survey is reflected by the high percentage coverage obtained for most geographic divisions and States. The percentage coverage indicates how much of the total estimated production for consumption for a State or a geographic division was actually reported by companies participating in this survey and was used to generate the estimated totals for that particular area.

The percent changes between the estimated production for consumption for the current quarter and the same quarter of the prior year included in this report are important indicators of the production/consumption trends occurring in a particular area of the country.

XX Not applicable.

¹Quarterly totals shown are estimates based on a sample survey. Estimated quantities for prior quarters have been recalculated.

²Data may not add to totals shown because of independent rounding, and differences between projected totals by States and by divisions.

³Number of companies reporting for the quarterly survey.

⁴State not included in quarterly survey.

⁵Owing to a low number of reporting companies, no production estimates by quarters were generated.

⁶To avoid disclosing proprietary data, certain State totals do not include all kinds of stone produced within the State; the portion not shown has been included with "Other."

⁷Compared with same period of preceding year; all percentages are calculated using unrounded totals.

XX Not applicable. -- Zero.

¹Quarterly totals shown are estimates based on a sample survey. Estimated quantities for prior quarters have been recalculated

²Data may not add to totals shown because of independent rounding, and differences between projected totals by States and by divisions

³Number of companies reporting for the quarterly survey

⁴State not included in quarterly survey.

⁵Owing to a low number of reporting companies, no production estimates by quarters were generated

⁶Compared with same period of preceding year; all percentages are calculated using unrounded totals

XX Not applicable.

¹Quarterly totals shown are estimates based on a sample survey. Estimated quantities for prior quarters have been recalculated.

²Data may not add to totals shown because of independent rounding, and differences between projected totals by States and by divisions.

³Number of companies reporting for the quarterly survey.

⁴State not included in quarterly survey.

⁵To avoid disclosing proprietary data, certain State totals do not include all kinds of stone produced within the State; the portion not shown has been included with "Other."

⁶Owing to a low number of reporting companies, no production estimates by quarters were generated.

⁷Compared with same period of preceding year; all percentages are calculated using unrounded totals.
